Background

This gene encodes a member of the DEAD box protein family. DEAD box proteins, characterized by the conserved motif

Product Name: DDX54 Rabbit Polyclonal Antibody

Asp-Glu-Ala-Asp (DEAD), are putative RNA helicases. They are implicated in a number of cellular processes involving alteration of RNA secondary structure such as translation initiation, nuclear and mitochondrial splicing, and ribosome and spliceosome assembly. Based on their distribution patterns, some members of this family are believed to be involved in embryogenesis, spermatogenesis, and cellular growth and division. The nucleolar protein encoded by this gene interacts in a hormone-dependent manner with nuclear receptors, and represses their transcriptional activity. Alternative splice variants that encode different isoforms have been found for this gene. [provided by RefSeq, Jul 2008],caution:The sequence shown here is derived from an Ensembl automatic analysis pipeline and should be considered as preliminary data.,function:Has RNA-dependent ATPase activity. Represses the transcriptional activity of nuclear receptors.,similarity:Belongs to the DEAD box helicase family. DDX54/DBP10 subfamily.,similarity:Contains 1 helicase ATP-binding domain.,similarity:Contains 1 helicase C-terminal domain.,subunit:Interacts in a hormone-dependent manner with nuclear receptors.,
