function:Plasma membrane-associated small GTPase which cycles between an active GTP-bound and an inactive GDP-bound state. Causes the formation of thin, actin-rich surface projections called filopodia. Functions cooperatively with CDC42 and Rac to generate additional structures, increasing the diversity of actin-based morphology.,similarity:Belongs to the small GTPase superfamily. Rho family.,function:Plasma membrane-associated small GTPase which cycles between an active GTP-bound and an inactive GDP-bound state.
