Product Name: Recombinant Human FABP7 (N-6His) Catalog #: PEH0156

C EnkiLife

Summary

Name BLBP/Brain Lipid-Binding Protein

Purity Greater than 95% as determined by reducing SDS-PAGE

Endotoxin level <1 EU/μg as determined by LAL test.

Construction Recombinant Human Fatty Acid-Binding Protein 7 is produced by our E.coli

expression system and the target gene encoding Val2-Ala132 is expressed

with a 6His tag at the N-terminus.

Accession # O15540

Host E.coli

Species Human

Predicted Molecular Mass 17.05 KDa

Formulation Lyophilized from a 0.2 µm filtered solution of 20mM PB, 10% Trehalose, 100mM

NaCl, 0.05% Tween 80, pH 7.5.

Shipping The product is shipped at ambient temperature. Upon receipt, store it

immediately at the temperature listed below.

Stability&Storage Store at \leq -70°C, stable for 6 months after receipt. Store at \leq -70°C, stable for 3

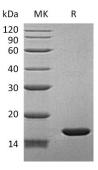

months under sterile conditions after opening. Please minimize freeze-thaw

cycles.

Reconstitution Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is

not recommended to reconstitute to a concentration less than 100µg/ml. Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles. Background

Product Name: Recombinant Human FABP7 (N-6His) Catalog #: PEH0156

Alternative Names

Fatty Acid-Binding Protein Brain; Brain Lipid-Binding Protein; BLBP; Brain-Type Fatty Acid-Binding Protein; B-FABP; Fatty Acid-Binding Protein 7; Mammary-

Derived Growth Inhibitor Related; FABP7; BLBP; FABPB; MRG

Background

Fatty Acid-Binding Protein 7 (FABP7) is a cytoplasm protein that belongs to the Fatty-acid Binding Protein (FABP) family of calycin superfamily. Fatty acid binding proteins are a family of small, highly conserved, cytoplasmic proteins that bind long-chain fatty acids. FABP7 is predominately expressed in brain and neural tissues. FABP7 is involved in fatty acid uptake and intracellular transport and is important in brain development. FABP7 plays a critical role in the transport of a so far unknown hydrophobic ligand with potential morphogenic activity during CNS development. FABP7 is required for the establishment of the radial glial fiber system in developing brain, a system that is necessary for the migration of immature neurons to establish cortical layers.
