## **Product Name: Recombinant Human DCK (N-6His-T7)**

Catalog #: PEH0527

#### **Summary**

Name Deoxycytidine kinase/DCK

**Purity** Greater than 95% as determined by reducing SDS-PAGE

**Endotoxin level** <1 EU/μg as determined by LAL test.

Construction Recombinant Human Deoxycytidine Kinase is produced by our E.coli

expression system and the target gene encoding Met1-Leu260 is expressed

with a 6His, T7 tag at the N-terminus.

Accession # P27707

Host E.coli

**Species** Human

Predicted Molecular Mass 34 KDa

**Formulation** Supplied as a 0.2 μm filtered solution of PBS, 50% Glycerol, 1mM TCEP, pH 7.4.

**Shipping** The product is shipped on dry ice/polar packs. Upon receipt, store it immediately

at the temperature listed below.

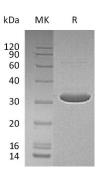

Stability&Storage Store at  $\leq$ -70°C, stable for 6 months after receipt. Store at  $\leq$ -70°C, stable for 3

months under sterile conditions after opening. Please minimize freeze-thaw

cycles.

### **Background**

Alternative Names Deoxycytidine Kinase; dCK; DCK

Background Deoxycytidine Kinase (DCK) is a member of the DCK/DGK family. DCK exists as a

homodimer and is localized to the nucleus. DCK is required for the

phosphorylation of the deoxyribonucleosides deoxycytidine (dC), deoxyguanosine (dG), and deoxyadenosine (dA). DCK has broad substrate specificity, and does not display selectivity based on the chirality of the substrate. In addition, DCK is also an essential enzyme for the phosphorylation of numerous nucleoside analogs widely employed as antiviral and chemotherapeutic agents. DCK is clinically important

because of its relationship to drug resistance and sensitivity.
