

## Summary

Name	Sonic Hedgehog/Shh (C25II)
Purity	Greater than 95% as determined by reducing SDS-PAGE
Endotoxin level	<0.01 EU/µg as determined by LAL test.
Construction	Recombinant Mouse Sonic Hedgehog is produced by our E.coli expression
Accession #	system and the target gene encoding Cys25-Gly198(Cys25Ile-Ile) is expressed. Q62226
Host	E.coli
Species	Mouse
Predicted Molecular Mass	19.8 KDa
Formulation	Lyophilized from a 0.2 $\mu$ m filtered solution of 20mM PB, 150mM NaCl, 1mM DTT, pH 7.4.
Formulation Shipping	pH 7.4. The product is shipped at ambient temperature. Upon receipt, store it
	pH 7.4.

## Background

Alternative Names Sonic Hedgehog Protein; SHH; HHG-1; SHH

Background Mouse Sonic Hedgehog Homolog (SHH) belongs to a three-protein family called Hedgehog. The other two family members are Indian Hedgehog (IHH) and Desert Hedgehog (DHH). Hedgehog proteins are key signaling molecules in embryonic development. SHH is expressed in various embryonic tissues and plays critical roles in regulating the patterning of many systems, such as limbs and brain. SHH also plays an important role in adult, including the division of adult stem cells and the development of certain cancers and other diseases. Mouse Shh is synthesized as a 437 aa precursor that contains a 24 aa signal sequence and a 413 aa mature region. The mature region is autocatalytically processed into a nonglycosylated, 20 kDa, 174 aa N/xadterminal fragment (Shh/xadN), and а catalytic/xadprocessing,glycosylated, 34 kDa, 239 aa C/xadterminal fragment. The 20 kDa Shh/xadN fragment is the core of the active hedgehog molecule. Mouse Shh/xadN is 99%, 98%, and 100% aa identical to human, rat and gerbil Shh/xadN, respectively.

## Note

For Research Use Only, Not for Diagnostic Use.
