Summary

Name TSLP/Thymic stromal lymphopoietin

Purity Greater than 95% as determined by reducing SDS-PAGE

Endotoxin level <1 EU/μg as determined by LAL test.

Construction Recombinant Cynomolgus Thymic Stromal Lymphopoietin is produced by our

E.coli expression system and the target gene encoding Tyr29-

Gln159(Glu37Gln) is expressed with a 6His tag at the C-terminus.

Accession # XP 005557555.1

Host E.coli

Species Cynomolgus

Predicted Molecular Mass 16.2 KDa

Formulation Lyophilized from a 0.2 µm filtered solution of 20mM Tris-HCl, 6% Trehalose, 2%

Glycine, 50mM NaCl, 0.05% Tween 80, pH7.5.

Shipping The product is shipped at ambient temperature. Upon receipt, store it

immediately at the temperature listed below.

Stability&Storage Store at \leq -70°C, stable for 6 months after receipt. Store at \leq -70°C, stable for 3

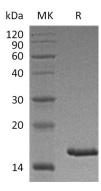

months under sterile conditions after opening. Please minimize freeze-thaw

cycles.

Reconstitution Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is

not recommended to reconstitute to a concentration less than 100µg/ml. Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles. Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is not recommended to reconstitute to a concentration less than 100µg/ml. Background

Alternative Names Thymic stromal lymphopoietin;Thymic stroma-derived lymphopoietin;Tslp

Background Thymic stromal lymphopoietin (TSLP) is a protein belonging to the cytokine family,

contains 140 amino acids. It is known to play an important role in the maturation of T cell populations through activation of antigen presenting cells. TSLP induces the release of T-cell-attracting chemokines from monocytes and, in particular, enhances the maturation of CD11c+ dendritic cells. It can induce allergic inflammation by directly activating mast cells. TSLP is produced mainly by non-hematopoietic cells such as fibroblasts, epithelial cells and different types of stromal or stromal-like cells. These cells are located in regions where TSLP activity

is required.
