

# Summary

Name	NTAL/LAT2
Purity	Greater than 95% as determined by reducing SDS-PAGE
Endotoxin level	<1 EU/µg as determined by LAL test.
Construction	Recombinant Human Linker for Activation of T-Cells Family Member 2 is produced by our Mammalian expression system and the target gene encoding Arg27-Ala243 is expressed with a 6His tag at the C-terminus.
Accession #	Q9GZY6
Host	Human Cells
Species	Human
Predicted Molecular Mass	25 KDa
Formulation	Lyophilized from a 0.2 $\mu m$ filtered solution of 20mM PB, 150mM NaCl, pH 7.4.
Shipping	The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature listed below.
Stability&Storage	Store at $\leq$ -70°C, stable for 6 months after receipt. Store at $\leq$ -70°C, stable for 3 months under sterile conditions after opening. Please minimize freeze-thaw cycles.
Reconstitution	Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is not recommended to reconstitute to a concentration less than 100µg/ml. Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles. Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is not recommended to reconstitute to a concentration less than 100µg/ml. Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles.

## Background

#### Product Name: Recombinant Human NTAL (C-6His) Catalog #: PHH1243

Alternative NamesLinker for Activation of T-Cells Family Member 2; Linker for Activation of B-Cells;<br/>Membrane-Associated Adapter Molecule; Non-T-Cell Activation Linker; Williams-<br/>Beuren Syndrome Chromosomal Region 15 Protein; Williams-Beuren Syndrome<br/>Chromosomal Region 5 Protein; LAT2; LAB; NTAL; WBS15; WBSCR15; WBSCR5<br/>Linker for Activation of T-Cells Family Member 2 (LAT2) is a single-pass type III<br/>membrane protein. LAT2 is highly expressed in the spleen, peripheral blood<br/>lymphocytes, and germinal centers of lymph nodes. LAT2 is involved in FCER1<br/>(high affinity immunoglobulin epsilon receptor)-mediated signaling in mast cells. It<br/>may also be involved in BCR (B-cell antigen receptor)-mediated signaling in B-cells<br/>and FCGR1 (high affinity immunoglobulin gamma Fc receptor I)-mediated<br/>signaling in myeloid cells. Coupleing activate of these receptors and their<br/>associated kinases with distal intracellular events through the recruitment of GRB2.
