# **Product Name: Recombinant Human UPK2 (C-6His)**

Catalog #: PHH1796

### **Summary**

Name Uroplakin-2/UPK2

**Purity** Greater than 95% as determined by reducing SDS-PAGE

**Endotoxin level** <1 EU/μg as determined by LAL test.

Construction Recombinant Human Uroplakin-2 is produced by our Mammalian expression

system and the target gene encoding Asp26-Gly155 is expressed with a 6His

tag at the C-terminus.

Accession # 000526

**Host** Human Cells

**Species** Human

Predicted Molecular Mass 14.84 KDa

Formulation Lyophilized from a 0.2 µm filtered solution of 20mM PB, 150mM NaCl, pH 7.4.

Shipping The product is shipped at ambient temperature. Upon receipt, store it

immediately at the temperature listed below.

**Stability&Storage** Store at  $\leq$ -70°C, stable for 6 months after receipt. Store at  $\leq$ -70°C, stable for 3

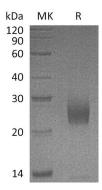

months under sterile conditions after opening. Please minimize freeze-thaw

cycles.

**Reconstitution** Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is

not recommended to reconstitute to a concentration less than 100µg/ml. Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles. ## **Background**

# **Product Name: Recombinant Human UPK2 (C-6His)**

Catalog #: PHH1796

Alternative Names Uroplakin-2; UP2; Uroplakin II; UPII; UPK2

Background Uroplakin-2 is a single-pass type I membrane protein that belongs to the

uroplakin-2 family. Uroplakin-2 is a component of the asymmetric unit membrane (AUM) and expressed in the ureter, a highly specialized biomembrane elaborated by terminally differentiated urothelial cells. Uroplakin-2 forms heterodimer with UPK1A that is necessary for exiting out of the endoplasmic reticulum (ER). Uroplakin-2 may play an important role in regulating the assembly of the AUM. AUM is believed to strengthen the urothelium by preventing cell rupture during

bladder distention.
