

# Summary

Name	VEGFD/FIGF/Vascular endothelial growth factor D	
Purity	Greater than 95% as determined by reducing SDS-PAGE	
Endotoxin level	<1 EU/ $\mu$ g as determined by LAL test.	
Construction	Recombinant Human Vascular Endothelial Growth Factor D is produced by our Mammalian expression system and the target gene encoding Phe93- Ser201 is expressed with a 6His tag at the C-terminus. O43915	
Accession #		
Host	Human Cells	
Species	Human	
Predicted Molecular Mass	13 KDa	
Formulation	Lyophilized from a 0.2 $\mu$ m filtered solution of PBS, pH 7.4.	
Shipping	The product is shipped at ambient temperature. Upon receipt, store it immediately at the temperature listed below.	
Stability&Storage	Store at $\leq$ -70°C, stable for 6 months after receipt. Store at $\leq$ -70°C, stable for 3 months under sterile conditions after opening. Please minimize freeze-thaw cycles.	
Reconstitution	Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is not recommended to reconstitute to a concentration less than $100\mu g/ml$ . Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles. Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is not recommended to reconstitute to a concentration less than $100\mu g/ml$ . Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles.

### Background

# Alternative NamesVascular Endothelial Growth Factor D; VEGF-D; c-Fos-Induced Growth Factor; FIGF;<br/>VEGFDBackgroundVascular endothelial growth factor D (VEGF-D) is a member of the platelet-derived<br/>growth factor/vascular endothelial growth factor (PDGF/VEGF) family. It is highly<br/>expressed in lung, heart, small intestine and fetal lung, and at lower levels in<br/>skeletal muscle, colon, and pancreas. VEGF-D is growth factor active in<br/>angiogenesis, lymphangiogenesis and endothelial cell growth, stimulating their<br/>proliferation and migration and also has effects on the permeability of blood<br/>vessels. It may function in the formation of the venous and lymphatic vascular<br/>systems during embryogenesis, and also in the maintenance of differentiated<br/>lymphatic endothelium in adults. It undergoes a complex proteolytic maturation,<br/>generating multiple processed forms that bind and activate VEGFR-2 and VEGFR-3<br/>receptors.

### Note

For Research Use Only, Not for Diagnostic Use.
