Product Name: Recombinant Mouse IL-21R (C-6His)

Catalog #: PHM0995

Summary

Name IL-21R/Interleukin-21 Receptor/IL21R

Purity Greater than 95% as determined by reducing SDS-PAGE

Endotoxin level <1 EU/μg as determined by LAL test.

Construction Recombinant Mouse Interleukin-21 Receptor is produced by our Mammalian

expression system and the target gene encoding Cys20-Pro236 is expressed

with a 6His tag at the C-terminus.

Accession # Q9JHX3

Host Human Cells

Species Mouse

Predicted Molecular Mass 25.7 KDa

Formulation Lyophilized from a 0.2 µm filtered solution of PBS, pH 7.4.

Shipping The product is shipped at ambient temperature. Upon receipt, store it

immediately at the temperature listed below.

Stability&Storage Store at \leq -70°C, stable for 6 months after receipt. Store at \leq -70°C, stable for 3

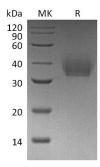

months under sterile conditions after opening. Please minimize freeze-thaw

cycles.

Reconstitution Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is

not recommended to reconstitute to a concentration less than 100µg/ml. Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles. Background

Product Name: Recombinant Mouse IL-21R (C-6His)

Catalog #: PHM0995

Alternative Names Interleukin-21 receptor; IL-21 receptor; IL-21R; Il21r; Nilr

Background Interleukin-21 receptor (IL-21R) is a type I transmembrane glycoprotein within the

class I cytokine receptor family, type 4 subfamily. IL-21R is expressed mainly on B cells, NK cells, and activated T cells, but is also found on dendritic cells, alternatively activated macrophages, intestinal lamina propria fibroblasts and epithelial cells, and keratinocytes. Both IL-21 and IL-4 are necessary for efficient B cell IgG1 production and normal germinal center architecture. B cell IL-21 R engagement induces Blimp-1(which mediates plasma cell differentiation), and is important for memory responses. IL-21R engagement on mouse NK cells enhances their cytotoxic activity and IFN- γ production. IL-21R engagement on CD8+ T cells aids control of viral infection and tumor growth; IL-21R is also necessary for sufficient numbers of regulatory T cells to combat chronic inflammation. IL-21R expression is often up-regulated in allergic skin inflammation, systemic lupus

erythematosus and diffuse large B cell lymphoma (DLBCL).
