Product Name: Recombinant Rhesus Macaque CD160 (C-6His Catalog #: PHV2027

Summary

Name CD160/CD160 antigen/BY55/NK receptor BY55/Natural killer cell receptor

BY55

Purity Greater than 95% as determined by reducing SDS-PAGE

Endotoxin level <1 EU/μg as determined by LAL test.

Construction Recombinant Rhesus Macaque CD160 Molecule is produced by our

Mammalian expression system and the target gene encoding Met1-Leu158 is

expressed with a 6His tag at the C-terminus.

Accession # G7MG20

Host Human Cells

Species Rhesus macaque

Predicted Molecular Mass 15.9 KDa

Formulation Lyophilized from a 0.2 µm filtered solution of PBS, pH 7.4.

Shipping The product is shipped at ambient temperature. Upon receipt, store it

immediately at the temperature listed below.

Stability&Storage Store at \leq -70°C, stable for 6 months after receipt. Store at \leq -70°C, stable for 3

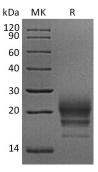

months under sterile conditions after opening. Please minimize freeze-thaw

cycles.

Reconstitution Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is

not recommended to reconstitute to a concentration less than 100µg/ml. Dissolve the lyophilized protein in distilled water. Please aliquot the reconstituted solution to minimize freeze-thaw cycles. Always centrifuge tubes before opening. Do not mix by vortex or pipetting. It is not recommended to reconstitute to a concentration less than 100µg/ml. Background

Product Name: Recombinant Rhesus Macaque CD160 (C-6His) Catalog #: PHV2027

Alternative Names CD160 antigen; CD160

Background CD160 antigen is a cell membrane protein which contains one Ig-likeV-type

(immunoglobulin-like) domain. CD160 is a GPI-anchored lymphocyte surface receptor in which expression is mostly restricted to the highly cytotoxic CD56(dim) CD16(+) peripheral blood NK subset. CD160 is a receptor showing broad specificity for both classical and non-classical MHC class I molecules. CD160 is expressed in spleen, peripheral blood, and smal lintestine. Expression of CD160 is restricted to functional NK and T cytotoxic lymphocytes. CD160 acts as a co-activator receptor for CD3-induced proliferation of CD4+ CD160+ T cells isolated from inflammatory skin lesions. Activated NK lymphocytes release a soluble form of CD160 that functionally impairs the MHC-I-specific cytotoxic CD8(+) T lymphocyte

responsiveness.
