## Background

EGFR is a receptor tyrosine kinase. Receptor for epidermal growth factor (EGF) and related growth factors including TGF-alpha, amphiregulin, betacellulin, heparin-binding EGF-like growth factor, GP30 and vaccinia virus growth factor. Is involved in the control of cell growth and differentiation. . A single-pass transmembrane tyrosine kinase. Ligand binding to this receptor results in receptor dimerization, autophosphorylation (in trans), activation of various downstream signaling molecules and lysosomal degradation.

## Research Area

Signal Transduction

## Image Data

Western blot analysis of EGFR in A549 lysates using EGFR antibody.

Immunoprecipitation analysis of EGFR (1A11) in HeLa lysates using EGFR antibody.
