## Background

Inhibits factor X (X(a)) directly and, in a Xa-dependent way, inhibits VIIa/tissue factor activity, presumably by forming a quaternary Xa/LACI/VIIa/TF complex. It possesses an antithrombotic action and also the ability to associate with lipoproteins in plasma.

## Research Area

Cardiovascular

## Image Data

Western blot analysis of TFPI in A549, HL-60, U2OS lysates using TFPI antibody.
