# Product Name: mGluR2 Rabbit Polyclonal Antibody Catalog #: APRab13859

### **Summary**

Production Name mGluR2 Rabbit Polyclonal Antibody

**Description** Rabbit Polyclonal Antibody

**Host** Rabbit

Application IHC,IF,ELISA

**Reactivity** Human, Mouse, Rat

### **Performance**

ConjugationUnconjugatedModificationUnmodified

**Isotype** IgG

Clonality Polyclonal Form Liquid

Store at 4°C short term. Aliquot and store at -20°C long term. Avoid freeze/thaw

cycles.

**Buffer** Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% New type preservative N.

**Purification** Affinity purification

### **Immunogen**

Storage

Gene Name GRM2

Alternative Names GRM2; GPRC1B; MGLUR2; Metabotropic glutamate receptor 2; mGluR2

**Gene ID** 2912.0

Q14416.The antiserum was produced against synthesized peptide derived from human **SwissProt ID** 

GRM2. AA range:241-290

# **Application**

**Dilution Ratio** IHC 1:100 - 1:300. IF 1:200 - 1:1000. ELISA: 1:5000. Not yet tested in other applications.

**Molecular Weight** 

## **Background**

# Product Name: mGluR2 Rabbit Polyclonal Antibody Catalog #: APRab13859

glutamate metabotropic receptor 2(GRM2) Homo sapiens L-glutamate is the major excitatory neurotransmitter in the central nervous system and activates both ionotropic and metabotropic glutamate receptors. Glutamatergic neurotransmission is involved in most aspects of normal brain function and can be perturbed in many neuropathologic conditions. The metabotropic glutamate receptors are a family of G protein-coupled receptors, that have been divided into 3 groups on the basis of sequence homology, putative signal transduction mechanisms, and pharmacologic properties. Group I includes GRM1 and GRM5 and these receptors have been shown to activate phospholipase C. Group II includes GRM2 and GRM3 while Group III includes GRM4, GRM6, GRM7 and GRM8. Group II and III receptors are linked to the inhibition of the cyclic AMP cascade but differ in their agonist selectivities. Two transcript variants encoding different isoforms have been found for this genefunction:Receptor for glutamate. The activity of this receptor is mediated by a G-protein that inhibits adenylate cyclase activity. May mediate suppression of neurotransmission or may be involved in synaptogenesis or synaptic stabilization.,similarity:Belongs to the G-protein coupled receptor 3 family,,subunit:Interacts with GRASP,,tissue specificity:Widely expressed in different regions of the adult brain as well as in fetal brain.,

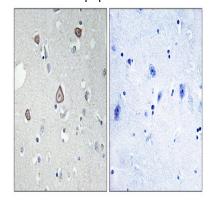

#### Research Area

Neuroactive ligand-receptor interaction;

### **Image Data**

Immunofluorescence analysis of LOVO cells, using GRM2 Antibody. The picture on the right is blocked with the synthesized peptide.
